

Year 2 (Fall - 2020) –Database Systems 1 Project

Peristera Airlines

Presented by:

- Nour Eldin Ahmed Samir – 20201895
- Mohamed Fawky Abdel-Atty – 20201872
- Omar Mohamed Ahmed Sabahy – 20201853
- Mohamed Ahmed Mahmoud Abdelsatar – 20201865
- Moaz Fouad – 20201885

Supervised by:

- Dr. Doaa El-Zanfaly
- Eng. Kholoud El-Zalama

INTRODUCTION

Around 400 BC, the Greek mathematician, astronomer, philosopher and statesman Architas designed the so-called oldest flying machine and built it in the shape of a bird and claimed to have flown with it for a distance of 200 meters. That instrument, which he called the dove (in Greek: Περιστέρα) "Peristera", might have been stuck on a rope or tube when flying.

This project is named as *Peristera* as an inspiration from "Peristera" the Greek island where the first idea of invention of a plane was created.

Aviation is considered the best, the fastest, and the more comfortable way to transport nowadays.

Most of the companies nowadays prefer to invest their businesses in airlines; and this inspired us to establish our database project about this idea, which is an airlines company.

SCOPE

This project scopes the daily workflow of an airline company (Peristera), it scopes only the workflow related to the airline company, employee in this

company, voyagers, and the daily routine expected to perform tasks and to help the voyagers to buy their tickets, not an airport.

We recommended (flight information, employee information, passengers' information, ticket information, plane information, the type of flight the passenger has selected, and the payment method the passenger has chosen to pay with).

PURPOSE

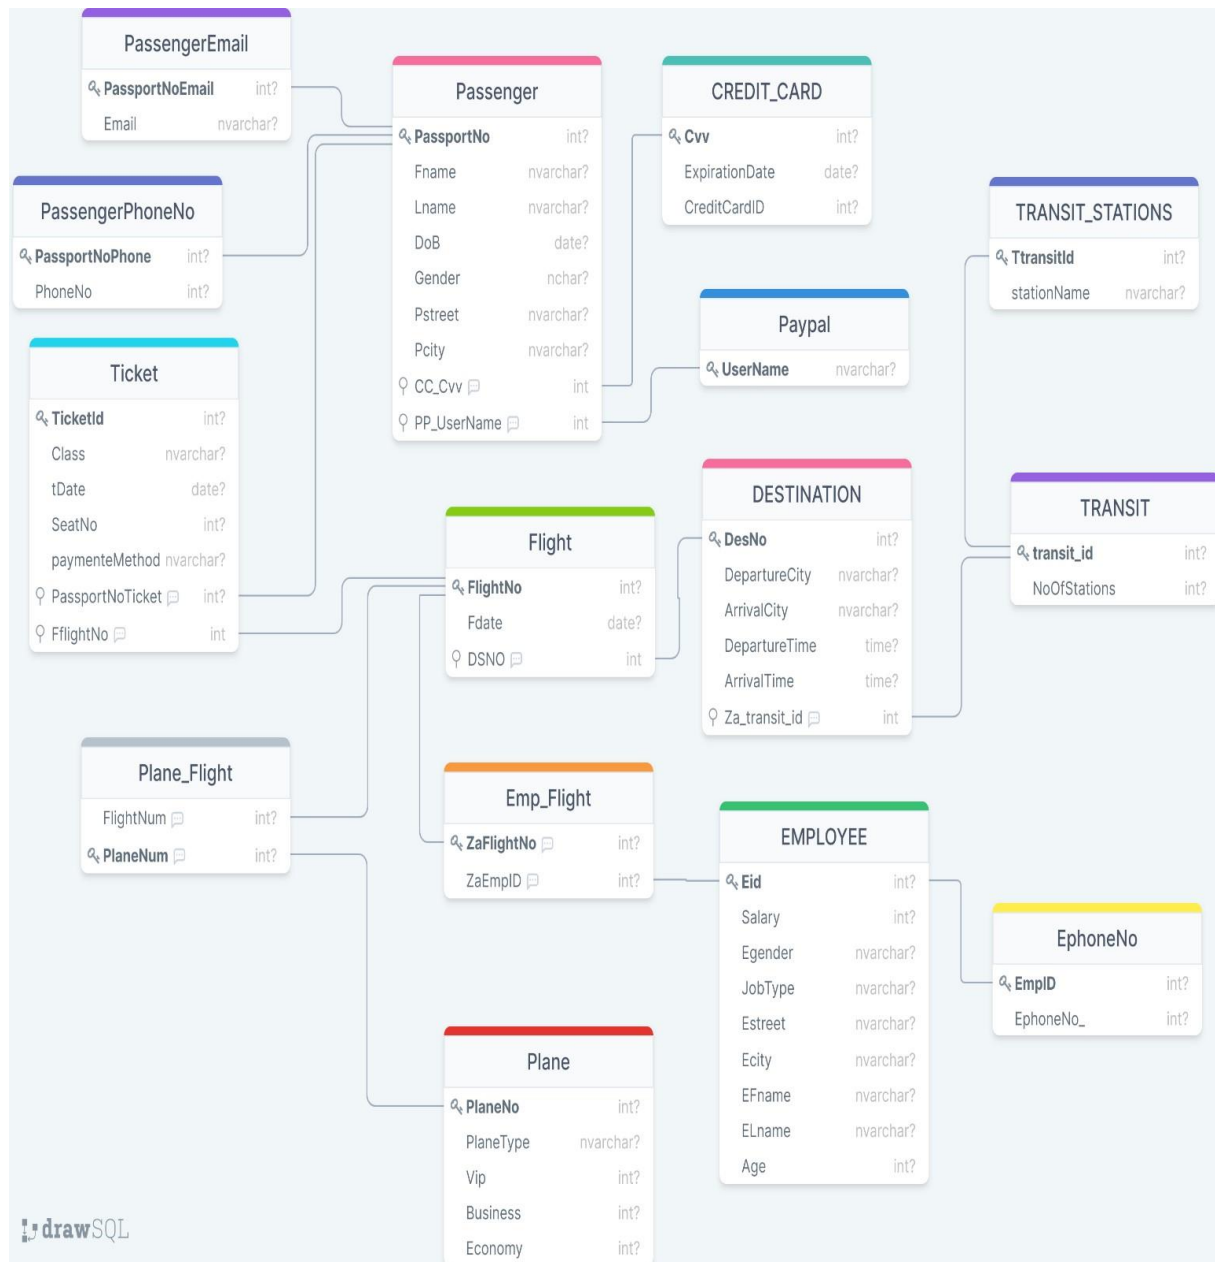

The purpose of this project is to improve the development and the services that are provided to the passenger plus detecting the errors and flaws of the previous systems and fixing it.

And we seek for a better service for the passenger to make his flight easier, more comfortable, and his registration is more flexible and precise.

MODAL DESIGNS

Here are the ER diagram and the conceptual schema defining the project:

DDL

The screenshot shows the Microsoft SQL Server Management Studio interface. The Object Explorer on the left displays the database structure for 'PIRESTERA'. The main query window shows the following SQL code:

```
CREATE DATABASE PIRESTERA

CREATE TABLE FLIGHT
(
    Fdate DATE,
    FlightNO BIGINT NOT NULL PRIMARY KEY,
    DestNO BIGINT NOT NULL /*FOREIGN KEY REFERENCES DESTINATION(DESNO)*/,
)

CREATE TABLE PLANE(
    PlaneNO BIGINT NOT NULL PRIMARY KEY,
    planeType nvarchar(100) ,
    VIP int,
    Economy int,
    Business int,
)

CREATE TABLE PLANE_FLIGHT
(
    FlightNum BIGINT /*FOREIGN KEY REFERENCES FLIGHT(FlightNO)*/,
    PlaneNum BIGINT /*FOREIGN KEY REFERENCES PLANE(PlaneNO)*/,
    PRIMARY KEY(FlightNum,PlaneNum)
)
```

The Results pane shows the following data:

Eid	Efname	Ename	salary	age	Egender	jobtype	Ecity	Estreet
123456	ahmed	essam	20000	29	male	pilot	cairo	eltahrer
147896	nour	ahmed	18500	27	female	co-pilot	cairo	ahmed basha
987654	omar	sayed	20000	32	male	pilot	helwan	saleh sobhy

Query executed successfully. (local) (12.0 RTM) LENOVO\Z50-70 (51) PIRESTERA 00:00:00 3 rows

The screenshot shows the Microsoft SQL Server Management Studio interface. The Object Explorer on the left displays the database structure for 'PIRESTERA'. The main query window shows the following SQL code:

```
CREATE table PASSENGER
(
    PassportNo BIGINT PRIMARY key not null,
    FName nvarchar(50) not null,
    Lname nvarchar(50) not null,
    DoB date not null,
    Gender nchar not null,
    Pstreet nvarchar(50) not null,
    Pcity nvarchar(50) not null,
    CC_Cvv BIGINT /*FOREIGN key REFERENCES CREDIT_CARD (Cvv)*/,
    PP_UserName nvarchar(50)/* FOREIGN key REFERENCES Paybal (UserName)*/,
)

CREATE TABLE CREDIT_CARD
(
    Cvv BIGINT PRIMARY KEY ,
    ExpirationDate date not null,
    CreditCardID BIGINT not null
)

CREATE TABLE Paybal
(
    UserName nvarchar(50) PRIMARY KEY
)

CREATE TABLE PassengerEmail
```

The Results pane shows the following data:

Eid	Efname	Ename	salary	age	Egender	jobtype	Ecity	Estreet
123456	ahmed	essam	20000	29	male	pilot	cairo	eltahrer
147896	nour	ahmed	18500	27	female	co-pilot	cairo	ahmed basha
987654	omar	sayed	20000	32	male	pilot	helwan	saleh sobhy

Query executed successfully. (local) (12.0 RTM) LENOVO\Z50-70 (51) PIRESTERA 00:00:00 3 rows

DML

The screenshot shows the Microsoft SQL Server Management Studio interface. The Object Explorer on the left displays the database structure for 'PIRESTERA'. The main query window contains a DML query that selects data from several tables. The results pane at the bottom shows the output of the query, which consists of three rows of employee data.

```
SELECT * FROM PassengerPhoneNo;

select * from employee where salary>17000

select Efname from employee where Efname like 'ah%' or Efname like 'no%'

select * from employee where jobtype = 'pilot'

select arrivalCity,departureCity from DESTINATION join flight on DESTINATION.DSNO=flight.DSNO where flightNO=12345;

select fname,lname from PASSENGER join PassengerPhoneNo on PassengerPhoneNo.PassportNoPhone=PassportNo where PassportNo=55998877;

select TicketId from Ticket join Passenger on Ticket.PassportNoTicket=Passenger.PassportNo where PassportNo =55998877

select planeType from Plane join Plane_Flight on Plane.PlaneNO = PLANE_FLIGHT.PlaneNum where PlaneNum=65212 ;

select ZaflightNO from Emp_Flight join employee on employee.Eid = Emp_Flight.ZaEmpid where ZaEmpid=987654 ;

select fname,lname from PASSENGER join CREDIT_CARD on CREDIT_CARD.Cvv=PASSENGER.CC_Cvv where Cvv=684;

select Efname,Elname from employee join EphoneNo on EphoneNo.Empid=employee.Eid where EphoneNo_0143015597;

select Class from ticket join PASSENGER on PASSENGER.PassportNo=TICKET.PassportNoTicket where Fname ="moaz";
```

Eid	Efname	Elname	salary	age	Egender	jobtype	Ecity	Estreet
123456	ahmed	essam	20000	29	male	pilot	cairo	eltahrer
147896	nour	ahmed	18500	27	female	co-pilot	cairo	ahmed basha
987654	omar	sayed	20000	32	male	pilot	helwan	saleh sobhy

The screenshot shows the Microsoft SQL Server Management Studio interface. The Object Explorer on the left displays the database structure for 'PIRESTERA'. The main query window contains a DDL query that adds foreign key constraints to several tables. The results pane at the bottom shows the output of the query, which consists of three rows of employee data.

```
ALTER TABLE DESTINATION
ADD FOREIGN KEY (Za_transit_id) REFERENCES TRANSIT(transit_id);

ALTER TABLE transit_station
ADD FOREIGN KEY (TtransitID) REFERENCES TRANSIT(transit_id);

ALTER TABLE EphoneNo
ADD FOREIGN KEY (Empid) REFERENCES employee(Eid);

ALTER TABLE Emp_Flight
ADD FOREIGN KEY (ZaEmpid) REFERENCES employee(Eid);

ALTER TABLE Emp_Flight
ADD FOREIGN KEY (ZaflightNO) REFERENCES FLIGHT(flightNO);

ALTER TABLE PASSENGER
ADD FOREIGN KEY (CC_Cvv) REFERENCES CREDIT_CARD(Cvv);

ALTER TABLE PASSENGER
ADD FOREIGN KEY (PP_Username) REFERENCES Paybal(Username);

ALTER TABLE PassengerEmail
ADD FOREIGN KEY (PassportNoEmail) REFERENCES PASSENGER(PassportNo);
```

Eid	Efname	Elname	salary	age	Egender	jobtype	Ecity	Estreet
123456	ahmed	essam	20000	29	male	pilot	cairo	eltahrer
147896	nour	ahmed	18500	27	female	co-pilot	cairo	ahmed basha
987654	omar	sayed	20000	32	male	pilot	helwan	saleh sobhy

```
